## BODY SHOP TIPS

are worth

# \$7.50

If you've developed an idea that has helped you to do body and fender work or painting better or faster, it may be worth money. Jot down the idea and, if necessary, make a rough sketch. Sometimes a snapshot will help. Just make the description of your BODY SHOP TIP clear, and if it is used, you'll receive a check for \$7.50.

### Rubber Scraper Makes Tool For Stirring Paints

When a kitchen rubber scraper is discarded, store it in the work shop or garage with paint supplies. It makes a fine tool for stirring paints and other liquids used in the work shop. Much better than using brushes for transferring paint from one container to another. *E. A. Stowell, 515 E. Oak St., Bosconobel, Wis.*

### Tip on Removing Vent Window Glass

Sometime ago I saw in your Body Shop Tip section a tip on replacing vent windows. It advised heating of vent frame for easy glass removal. I'd like to add something to that tip. Put

three or four strips of masking tape on each side of glass near open edge. Then snap a pair of vise grip pliers on. This gives you a good grip on the glass and will not crush or break glass. *Bud Teske, Spencer Motors, 111 North St., Waukesha, Wis.*

### How To Make A Handy Body Jack

When space doesn't permit use of small body jack or spreader attachment, an efficient jack screw can be quickly made from various items found

around the shop. They are a lower pivot pin and bushing from an "A" frame front suspension and an outer front wheel bearing assembly. Tack weld cone of bearing on end of bushing opposite shouldered end. Assemble bearing and jack screw is complete. Turning bushing on threaded pin gives an adjustment of approximately 2 1/4 inches. *Dean Tarkington, Mancuso Motors Inc., Body Department, Batavia, N. Y.*

### Painting Wheels Without Removing The Tires

Take a piece of tin 26 inches square. Put a 17 inch wheel on the tin and mark the inside circle. Cut it out and then make the outside round, leaving the piece 5 inches across. Then cut the piece in two. Next you wrap it around a 15 inch wheel and weld it together. Put a flange on the inside of it and about 1/2 inch, pointing it toward the tire so it will go inside the bead on the wheel. Put strap iron on two sides in the form of a hook and put two spring steel bands (such as a clock spring) on the other side. This will help you snap it on the wheel so you can paint. This is for a 15 inch wheel. The same can be done to make one for a 14 inch wheel by using a 16 inch wheel to start with, instead of a 17 inch wheel. *Ralph J. Hill, Foreman, Mace Motors, Inc., Canton, N. Y.*
